

### LE 3.B Taking A Focused Walk Together: Relationships

Learning to notice relationships in the natural world is important for understanding science concepts. The focus on connections among different members and parts of a system helps us understand the many ways in which everything is connected. Some questions to consider while you walk with your family:

- *What kinds of relationships are you noticing? What does it remind you of?*
- *Who is in a relationship with whom? Who or what benefits from this relationship?*
- *Can you find a relationship that is not directly connected, but still part of the bigger system?*

We noticed:
