

Family Field Data Collection

Please return your observations and wonderings by: _____

Hello, Families!

As you know, we have been noticing, wondering, and modeling a garden task in order to pose a “Should We” question to guide our science learning this week! In summer camp, we are now conducting *investigations* to help us answer our “Should we” question! In an investigation we collect *data* in the garden. Data that we collect will become evidence for us to make sense of what we are observing. From this we can make claims about why we think it’s happening.

Our “Should We” question is _____

Our investigation question is _____

Activity Purpose: We need your help! An important part of science is collecting data in multiple places and at multiple times. The more data we collect, the stronger our *evidence* for claims that we will make. Please use the attached investigation protocol to conduct an investigation in your neighborhood, at a nearby garden, or anywhere you go to be outside!

[attach data collection protocol here]
